	ITER, SIKSHA 'O' ANUSANDHAN (Deemed to be University)		Assignment 2
Branch	**CSE**	Programme	**B.Tech**
Course Name	**Computer Science Workshop 2**	Semester	**4th**
Course Code	**CSE 3141**	Academic Year	**2025-2026**
Assignment: 2		**Topic: HTML and CSS**	
Learning Level (LL)	**L1**: Remembering	**L3:** Applying	**L5**: Evaluating
	L2: Understanding	**L4**: Analysing	**L6**: Creating

Q's	Questions	COs	LL
Q1.	Create an HTML page with a heading titled "**RESUME**" that contains a brief description of yourself and includes the following subsections: **Personal Information:** • Add a heading, "**Personal Information**" using the <h1> tag to introduce the section. • Below the heading, use an unordered list (<ul>) to display your full name, age, roll no., and nationality as individual list items (<li>). • Add a clickable link to your LinkedIn profile using the <a> tag. The link text should be "**View my LinkedIn Profile**" and it should open your LinkedIn page in a new tab. **Educational Achievements:** • Use an ordered list (<ol>) to display your academic qualifications, such as your 10th-grade, 12th-grade, and degree percentage. Also, use superscript and emphasis tags as required. **Contact Information:** • Add a heading, "**Contact Me**" using the <h1> tag. • Below the contact information, use the <address> tag to display your home address, ensuring it's properly formatted.	CO1	**L1, L2**
Q2.	**Create an HTML page for an image gallery:** • Add a heading, "My Image Gallery," using the <h1> tag to introduce the section. • Insert three different images using the <img> tag. Each image should have an appropriate alt attribute describing the image in case it fails to load. • Make each image clickable, linking to a larger version of the image using the <a> tag. The larger images should open in a new tab. • Add a caption below each image.	CO1	**L2, L3**
Q3.	**Create a Student Report Table:** • Create a table displaying details such as Student Name, Roll No., Subject, Marks, and Grade. • The table should have a border and a header row.	CO1	**L1, L2**

	• Include a caption that says "Student Report". • Add a column for each subject (Math, Science, English).		
Q4.	**Design an HTML Page for Your Schedule:** • Add a heading, "My Weekly Schedule," using the <h1> tag. • Create a table with two columns: one labelled "Day" and the other labelled "Activities," using the <th> tag for the column headings. • Fill in the table using the <td> tag for the data cells. List the days of the week in one column and your daily activities in the other.	CO1	**L1, L2**
Q5.	**Create an HTML Page for Movies or TV Shows:** • Add a heading, "Favorite Movies/TV Shows," using the <h1> tag to introduce the section. • Create an ordered list (<ol>) to display your top five favourite movies or TV shows, listing each one as a list item (<li>). • Make each movie or TV show title a clickable hyperlink to its IMDb page using the <a> tag, ensuring that the link opens in a new tab with the target="_blank" attribute.	CO1	**L2, L3**
Q6.	**Create an HTML Page for Your Hobbies:** • Add a heading, "My Hobbies," using the <h1> tag to introduce the section. • Create an unordered list (<ul>) of your hobbies, with each hobby as a list item (<li>). • For one of your hobbies, add a link to a related website using the <a> tag. For example, if you enjoy photography, link to a photography tutorial site or blog. • Ensure that each hyperlink opens a new page in the same browser. • Each new page should include a link titled "Go Back" that takes you back to the main page.	CO1	**L2, L3**
Q7.	Create an HTML page with headings and paragraphs. Apply inline styles to the h1 and h2 headings, such as changing the font color and size. Use internal styles for the h3 and h4 headings by applying styles using the id attribute, such as setting text alignment and font-weight. Additionally, link an external stylesheet to define the body background color, style the h5 heading, and set the paragraph's text color and font size using the class attribute. Ensure the external stylesheet is properly linked to the HTML page.	CO1	**L1, L2**
Q8.	Create a webpage that displays an HTML table. Apply CSS styles (such as border, border-collapse, width, height, padding, etc.) to enhance its appearance. Additionally, set a background color for the alternate row in the table.	CO1	**L2, L3**
Q9.	Add an image as the background of a element and change the image source when the user hovers the mouse over the image. In other words, when the user moves the mouse pointer over the image, the background image should change.	CO1	**L2, L3**
Q10.	Create an HTML page using elements to display student information. Use	CO1	**L2, L3**

	nested elements and apply CSS styling so that the layout appears similar to a table. The page should display details such as **Name, Address,** and **Course**, and further extend the layout by adding additional fields, such as **Email** and **Phone Number**. Ensure that the information is organised clearly in two columns showing the field name and its corresponding value.		
	-END-		

Note:

1. Assignment carries a weightage of 10% **marks out of 100**
2. Only CO1 outcomes are covered.

Course Outcomes	CO1	Remember and identify the fundamental concepts of web development and Django framework.
	CO2	Explain and interpret Django workflows such as authentication, template rendering, and form handling.
	CO3	Apply Django concepts to develop functional web applications.
	CO4	Implement advanced Django features including APIs, payments, internationalization, and real-time systems.
	CO5	Analyze Django applications with respect to caching strategies, API design, data flow, and performance-related design considerations.
	CO6	Analyze and design an end-to-end Django solution including deployment and system integration.
